STRENGTHENING TECHNICAL SKILLS AND COMMUNITY COLLABORATION

July 2026 was a month of breadth and depth for the SomNOG Capacity Building Series. Sessions spanned DevOps, cloud computing, and IPv6 - delivered across virtual and in-person formats, from university campuses in Mogadishu to a virtual session reaching participants across the community. The month also marked continued expansion of SomNOG's university engagement, with in-person sessions delivered directly on campus at two Mogadishu universities. All activities were delivered in partnership with the Internet Society Somalia Chapter.

CAPACITY BUILDING ACTIVITIES CONDUCTED

Cloud Computing 101: Core Concepts and Service Models - University Edition | JUST

This session introduced students at Jamhuriya University of Science and Technology to the fundamentals of cloud computing. Topics covered included what the cloud is and how it differs from traditional IT systems, core service models (IaaS, PaaS, SaaS), deployment models, and an overview of major cloud providers including AWS, Microsoft Azure, and Google Cloud. The session concluded with an interactive discussion on real-world cloud use cases.

Mode:	In-Person
Location:	Innovation Hall, Jamhuriya (JUST)
Participants:	32
Facilitator:	Ismail Mumin, SomNOG Community

Date:
07 July,
2026

IPv6 101: Addressing Fundamentals

A two-hour virtual session covering IPv4 exhaustion and its implications for African networks, IPv6 address notation and shortening rules, IPv6 address types, address planning for ISPs and enterprises, and basic IPv6 configuration on hosts and routers. Designed for network engineers, systems administrators, and ICT professionals seeking a solid foundation in IPv6 before advancing to routing and transition topics.

Mode:	Virtual (Zoom)
Participants:	55
Facilitator:	Mohamed Ali Ahmed (Bile), SomNOG Community

Date:

Topic	IPv6 101: Addressing Fundamentals and Basic Configuration
Date & Time	Selected Sessions: Aug 1, 2026 04:00 PM
Description	Free virtual training from SomNOG's Capacity Building Series, delivered in partnership with the ISOC Somalia Chapter. Covers IPv6 addressing fundamentals and basic configuration - notation, address types, address planning, and host/router setup. For network engineers, sysadmins, and ICT professionals.

DevOps 101: Core Concepts and Practices

A beginner-friendly introduction to the DevOps discipline, providing participants with a clear understanding of how modern software is developed, delivered, and operated in real-world environments. Topics included Linux basics, version control with Git, containers with Docker, cloud computing fundamentals, and CI/CD pipelines - using practical examples to build a strong working foundation.

Mode:	In-Person
Location:	UNISO Admin Campus, Hodan,
Participants:	15
Facilitator:	Omar A. Hassan, SomNOG Community

30 July,
2026

Steering Committee Update - July 2026

While no formal Steering Committee meeting was held in July, work continued across all active workstreams. SomNOG9 preparations advanced on multiple fronts including program development, workshop and conference logistics, and sponsorship and partnership outreach. The month also marked a significant governance milestone: a new draft of the SomNOG Bylaws was completed and shared with the community for consultation

Looking Ahead

August 2026

August will be focused on SomNOG9 - now in its final weeks of preparation. The team will be working on finalizing the workshop and conference program, advancing sponsorship commitments, and continuing community consultation on the updated Bylaws. The Advisory Committee formation process will also get underway, with a call for nominations to be shared with the community.
